

## Transmitting the data 7

Take a reading daily unless advised otherwise by your healthcare provider. The LED will turn **RED** at **midnight** and then turn **GREEN** once a measurement has been successfully transmitted.

Revision 01.05.25

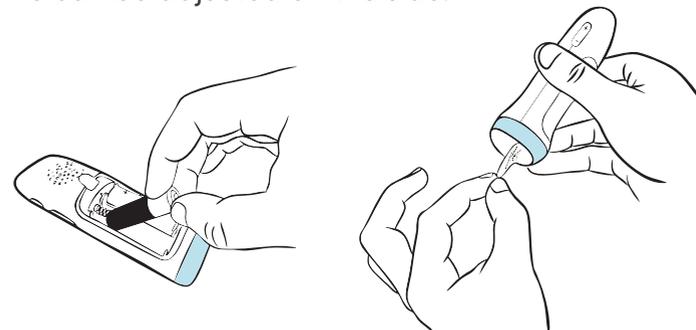

## Power your Gateway 1

Plug your Gateway into a power outlet with the provided power cord and wait until the LED on the Gateway turns **RED**.

## Install batteries and setup 2

Install batteries and remove the protective film from the flat end of the device. Turn on the device by holding down the **power button for three seconds**. Volume can be adjusted on the side.

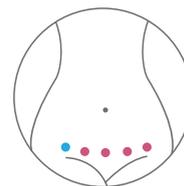

## Position your body 3

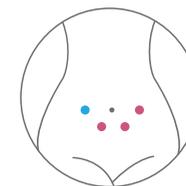

**Lay back** in a comfortable position on your bed with pillows behind your back. Cover the flat end of the device with a thin layer of Gel.

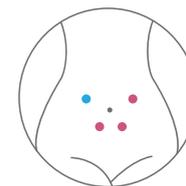

## Place the device on your belly 4

16 - 24 Weeks

24 - 32 Weeks

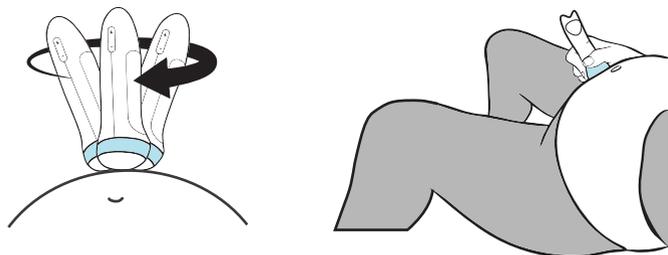

32 - 40 Weeks

Press the **flat end of the device** on the skin on the blue dot in the diagram. Apply enough pressure so the device maintains **full contact** with the belly. The average fetal heart rate is 110 bpm-160 bpm. Values are displayed in **white** when within this range and **red** when they are out of range.

## Finding the baby's heart 5

Babies change positions. **Adjust the angle** until you hear the baby's heartbeat. If you aren't getting a good signal, **move to the next dot on the diagram** repeating the same hand motion until you hear the heartbeat loud and clear for a minimum of 6 seconds.

## Successful Measurement 6

After getting a **clear audio signal**, the baby's heart rate will be **transmitted to the Gateway and sent to your provider**. The Gateway will beep twice for your first reading, once for each following reading, and three extra times on the 24th reading. Turn the device off and back on to transmit more readings to your Gateway.
