

# Strengthening Rural Health Transformation Grant Applications

## The CMS Challenge

Rural providers face gaps in chronic disease management due to limited connectivity, fragmented technology, and lack of visibility between visits. CMS Rural Health Transformation (RHT) funding prioritizes scalable technology, equitable access, and sustainable chronic care models that work in real-world rural environments.

Tenovi provides the infrastructure to meet these goals without increasing operational burden.

## Proven Rural Outcomes (6-Month Results)

Palmetto Care | Rural South Carolina

- 42% improvement in blood pressure control
- 19% improvement in A1C
- 13% of patients maintained stable A1C
- 45% of patients released from care after
- 74% patient engagement / compliance

Tenovi provides the infrastructure to meet these goals without increasing operational burden.

## Why Tenovi Strengthens an RHT Grant Application

### One Infrastructure for Chronic Care

- Supports 50+ connected devices across conditions
- Single data stream into existing workflows
- Enables multi-condition programs without siloed tools

### Reliable Connectivity for Rural Environments

- Universal cellular SIM connects to strongest available carrier
- Wi-Fi fallback when available
- No apps, smartphones, or patient setup required

### Sustained Engagement Over Time

- Simple, passive patient experience
- Fewer failure points → higher adherence
- Designed for long-term chronic disease management

## Alignment to CMS RHT Priorities

- **Technology modernization:** Interoperable device ecosystem, single data flow
- **Chronic disease management:** Multi-condition monitoring and adherence
- **Rural access & equity:** Reliable connectivity regardless of geography
- **Scalability & sustainability:** One infrastructure, multiple programs
- **Outcome-driven care:** Measurable clinical improvement

## Why Include Tenovi?

Tenovi is not a point solution. It is infrastructure that enables rural providers to scale chronic care, demonstrate measurable outcomes, and meet CMS expectations for innovation, equity, and sustainability.

- Reliable connectivity that supports rural access and equity
- One infrastructure supporting multiple chronic care programs
- Passive patient experience designed for long-term engagement
- Centralized data to support reporting and performance measurement
